ELSEVIER

Comput. Methods Appl. Mech. Engrg. 121 (1995) 473–476

Computer methods in applied mechanics and engineering

Subject index of Volume 121

Boundary element methods
A direct boundary integral equations method to subsonic flow with circulation past thin airfoils in ground effect, L. Dragoş and A. Dinu 163–176
An analysis of the TRUNC element for coupled plates with rigid junction, L.-h. Wang 1– 14
Stochastic boundary elements for two-dimensional potential flow in non-homogeneous media, I. Kaljevi and S. Saigal 211–230

Collocation method
A direct boundary integral equations method to subsonic flow with circulation past thin airfoils in ground effect, L. Drago and A. Dinu 163–176

Coupled problems
An analysis of the TRUNC element for coupled plates with rigid junction, L.-h. Wang 1– 14

Dynamics
An orthonormal tangent space method for constrained multibody systems, W. Blajer 45– 57
Analysis of dynamic contact of cracks in viscoelastic media, J. Liu and S.K. Sharan 187–200
Random vibration of uniform beams with varying boundary conditions by the dynamic-edge-effect method, I. Elishakoff, Y.K. Lin and L.P. Zhu 59– 76
Topological design for vibrating structures, Z.-D. Ma, N. Kikuchi and H.-C. Cheng 259–280

Finite difference methods
A comparison of higher-bounded convection schemes, Seok Ki Choi, Ho Yun Nam and Mann Cho 281–301

Finite element and matrix methods
A parallel adaptive strategy for *hp* finite element computations, J.T. Oden and A. Patra 449–470
A regularized dual mixed element for plane elasticity. Implementation and performance of the BDM-element, O. Klaas, J. Schröder, E. Stein and C. Miehe 201–209
A unified approach for variationally consistent finite elements in elastoplasticity, C. Comi and U. Perego 323–344
An automatic procedure with a control of accuracy for finite element analysis in 2D elasticity, P. Coorevits, P. Ladeveze and J.-P. Pelle 91–120
Analysis of dynamic contact of cracks in viscoelastic media, J. Liu and S.K. Sharan 187–200
Conjugate Gradient-like solution algorithms for the Mixed Finite Element approximation of the Biharmonic Equation, applied to plate bending problems, M.B. van Gijzen 121–136

Elastic-plastic analysis of arbitrary heterogeneous materials with the Voronoi Cell finite element method, S. Ghosh and S. Moorthy 373–409
Numerical solving of frictionless contact problems in perfectly plastic bodies, M. Burguera and J.M. Viaño 303–322
Recursive spectral algorithms for automatic domain partitioning in parallel finite element analysis, S.-H. Hsieh, G.H. Paulino and J.F. Abel 137–162
Spectral super-elements for wave propagation in structures with local non-uniformities, S. Gopalakrishnan and J.F. Doyle 77– 90
Synthetic-structured finite element analysis of shells, D. Briassoulis 411–448
Topological design for vibrating structures, Z.-D. Ma, N. Kikuchi and H.-C. Cheng 259–280

Fluid mechanics
A comparison of higher-bounded convection schemes, Seok Ki Choi, Ho Yun Nam and Mann Cho 281–301
A direct boundary integral equations method to subsonic flow with circulation past thin airfoils in ground effect, L. Drago and A. Dinu 163–176
Numerical study of three multilevel preconditioners for solving 2D unsteady Navier–Stokes equations, R.E. Ewing, O.P. Iliev, S.D. Margenov and P.S. Vassilevski 177–186
Stochastic boundary elements for two-dimensional potential flow in non-homogeneous media, I. Kaljevi and S. Saigal 211–230

Fracture mechanics
An internal crack in a half-plane solid with clamped boundary, J.C. Sung and J.Y. Liou 361–372
Analysis of dynamic contact of cracks in viscoelastic media, J. Liu and S.K. Sharan 187–200

Gas dynamics
A parallel adaptive strategy for *hp* finite element computations, J.T. Oden and A. Patra 449–470

General Rayleigh–Ritz and Galerkin techniques
A regularized dual mixed element for plane elasticity. Implementation and performance of the BDM-element, O. Klaas, J. Schröder, E. Stein and C. Miehe 201–209

Incompressible and near incompressible media
A regularized dual mixed element for plane elasticity. Implementation and performance of the BDM-element, O. Klaas, J. Schröder, E. Stein and C. Miehe 201–209

Modern computer architecture
Recursive spectral algorithms for automatic domain partitioning in parallel finite element analysis, S.-H. Hsieh, G.H. Paulino and J.F. Abel 137–162

Nonlinear dynmics of systems
An orthonormal tangent space method for constrained multibody systems, W. Blajer 45– 57

Nonlinear mechanics
A unified approach for variationally consistent finite elements in elastoplasticity, C. Comi and U. Perego 323–344
An orthonormal tangent space method for constrained multibody systems, W. Blajer 45– 57

Numerical solution procedures
A direct boundary integral equations method to subsonic flow with circulation past thin airfoils in ground effect, L. Drago and A. Dinu 163–176
A parallel adaptive strategy for *hp* finite element computations, J.T. Oden and A. Patra 449–470
A regularized dual mixed element for plane elasticity. Implementation and performance of the BDM-element, O. Klaas, J. Schröder, E. Stein and C. Miehe 201–209
An automatic procedure with a control of accuracy for finite element analysis in 2D elasticity, P. Coorevits, P. Ladeveze and J.-P. Pelle 91–120
Analysis of dynamic contact of cracks in viscoelastic media, J. Liu and S.K. Sharan 187–200
Conjugate Gradient-like solution algorithms for the Mixed Finite Element approximation of the Biharmonic Equation, applied to plate bending problems, M.B. van Gijzen 121–136
Elastic-plastic analysis of arbitrary heterogeneous materials with the Voronoi Cell finite element method, S. Ghosh and S. Moorthy 373–409
Explicit consistent tangent moduli with a return mapping algorithm for pressure-dependent elastoplasticity models, Z.L. Zhang 29– 44
Numerical solving of frictionless contact problems in perfectly plastic bodies, M. Burguera and J.M. Viaño 303–322
Numerical study of three multilevel preconditioners for solving 2D unsteady Navier–Stokes equations, R.E. Ewing, O.P. Iliev, S.D. Margenov and P.S. Vassilevski 177–186
On the accuracies of numerical integration algorithms for Gurson-based pressure-dependent elastoplastic constitutive models, Z.L. Zhang 15– 28
Recursive spectral algorithms for automatic domain partitioning in parallel finite element analysis, S.-H. Hsieh, G.H. Paulino and J.F. Abel 137–162
Surrogates for numerical simulations; optimization of eddy-promoter heat exchangers, S. Yeşilyurt and A.T. Patera 231–257

Optimization and design of structures
Structural sensitivity analysis via reduced-order analytical model, R.M. Lin and M.K. Lim 345–359
Topological design for vibrating structures, Z.-D. Ma, N. Kikuchi and H.-C. Cheng 259–280

Optimization
Surrogates for numerical simulations; optimization of eddy-promoter heat exchangers, S. Yeşilyurt and A.T. Patera 231–257
Topological design for vibrating structures, Z.-D. Ma, N. Kikuchi and H.-C. Cheng 259–280

Plasticity
A unified approach for variationally consistent finite elements in elastoplasticity, C. Comi and U. Perego 323–344
Elastic-plastic analysis of arbitrary heterogeneous materials with the Voronoi Cell finite element method, S. Ghosh and S. Moorthy 373–409
Numerical solving of frictionless contact problems in perfectly plastic bodies, M. Burguera and J.M. Viaño 303–322

Shells and plates
Conjugate Gradient-like solution algorithms for the Mixed Finite Element approximation of the Biharmonic Equation, applied to plate bending problems, M.B. van Gijzen 121–136
Synthetic-structured finite element analysis of shells, D. Briassoulis 411–448

Singularity methods
An internal crack in a half-plane solid with clamped boundary, J.C. Sung and J.Y. Liou 361–372

Stochastic processes
Random vibration of uniform beams with varying boundary conditions by the dynamic-edge-effect method, I. Elishakoff, Y.K. Lin and L.P. Zhu 59– 76
Stochastic boundary elements for two-dimensional potential flow in non-homogeneous media, I. Kaljevi and S. Saigal 211–230

Structural mechanics
A unified approach for variationally consistent finite elements in elastoplasticity, C. Comi and U. Perego 323–344
Conjugate Gradient-like solution algorithms for the Mixed Finite Element approximation of the Biharmonic Equation, applied to plate bending problems, M.B. van Gijzen 121–136
Random vibration of uniform beams with varying boundary conditions by the dynamic-edge-effect method, I. Elishakoff, Y.K. Lin and L.P. Zhu 59– 76
Spectral super-elements for wave propagation in structures with local non-uniformities, S. Gopalakrishnan and J.F. Doyle 77– 90
Synthetic-structured finite element analysis of shells, D. Briassoulis 411–448
Topological design for vibrating structures, Z.-D. Ma, N. Kikuchi and H.-C. Cheng 259–280

Subsonic flow
A direct boundary integral equations method to subsonic flow with circulation past thin airfoils in ground effect, L. Drago and A. Dinu 163–176

Transport phenomena
A comparison of higher-bounded convection schemes, Seok Ki Choi, Ho Yun Nam and Mann Cho 281–301
Surrogates for numerical simulations; optimization of eddy-promoter heat exchangers, S. Yeşilyurt and A.T. Patera 231–257

Viscoelastic and viscoplastic media
Analysis of dynamic contact of cracks in viscoelastic media, J. Liu and S.K. Sharan 187–200

Viscous flow
Surrogates for numerical simulations; optimization of eddy-promoter heat exchangers, S. Yeşilyurt and A.T. Patera 231–257

Wave motion
Spectral super-elements for wave propagation in structures with local non-uniformities, S. Gopalakrishnan and J.F. Doyle 77– 90
